

Erchonia Laser Case Study – Lumbar Back Pain

Spinal Pain in Rico

16-year-old Maltipoo

Had two previous episodes of lumbar back pain Nov 09 and Feb 11. In both cases, treated with VOM (one adjustment each time) and Metacam (anti-inflammatory) was dispensed. Recovered both times.

June 2011 - Owner fell over dog.

Exam:

- Muscles of ventral neck spasmed, could not turn head
- Lumbar spine (all) sensitive and very stiff

Owner would prefer no medication.

Did VOM and Vetrostim

Also did Light therapy – Rico “melted” with the treatment.

Schedule and results:

Frequencies used:

9-16-42-53/465-25-666-20.5/45.2-8166-1550-36 musculoskeletal

9-16-42-53/216-66-96-43/8166-45.2-20.5-1260 arthritis

Day 1: did twice

Day 2: did once – back muscles much looser; can move neck easily Day 7: lumbar muscles feel relaxed and not sore; neck muscles still a little tender Day 9: neck looser Day 16: owner reports “cured”. No sensitivity anywhere in spine, muscles on right side of neck still more prominent than left side, but not sore on palpation Plan – anticipate three more weekly sessions to get full healing
